

Customisable content

The table comes with a SMART Table Toolkit, which enables teachers to access applications and build a variety of activities around them. It's easy to take a multiple choice activity on North American animals, for example, and switch in images of tigers, elephants, lions and gazelles. Now you have an African animal exercise.

The toolkit is carried on the SMART Table USB bracelet. Teachers can use the bracelet to transfer digital activities between the table and their own computers.

For further flexibility, teachers can download customizable SMART Table activity packs from SMART's educator resources webpage, <http://www.smarttech.com/tableactivities>. The packs include interactive activities that correspond with SMART-created lesson activities and Senteo question sets. New packs will be added on an ongoing basis.
