

A collaborative learning centre

The SMART Table includes learning applications that require students to work together on a problem and then come to a consensus before giving their answer.

Complements the SMART Board

For teachers wanting to optimize both whole-class and small-group learning, the SMART Table is an excellent complement to the SMART Board interactive whiteboard. Teachers can introduce a concept on the interactive whiteboard with all students, then reinforce it through group work at the SMART Table learning centre. For example, a geography lesson begun on the interactive whiteboard could be reinforced with a mapping activity on the table.

Includes ready-made, hands-on activities

The table comes with a collection of applications that provide teachers with ready-made activities. The activities help children learn and apply age-appropriate skills, such as reading and counting. A wide range of activities are available, and many are customizable.

Teachers can use the following applications:

- **Multiple Choice:** Students answer questions by dragging their answer to a central image
- **HotSpots:** Students identify parts of a diagram by dragging labels to the correct spot
- **Paint:** Students select colours and effects and then paint with their fingers
- **Media:** Students drag or resize photos and videos
- **Addition:** Students work together to solve maths problems
- **Puzzle:** Students work together to solve a tangram or jigsaw puzzle

The table's collection of applications will be growing significantly in the coming months.
